Attempts are app quiz sessions. Scores are calculated through answers and submission; this screen is not a form for manually creating results.

Screen / location: Admin → Quiz Attempts

Actual source preview - local demo data - live values may differ

1. Search and filters

2. Attempt status

3. View and export

Step by step

1. Filter Quiz Attempts by user, category, quiz, status, and date as needed.

2. Open View and read started/completed timestamps, elapsed time, answered count, and correct/wrong counts together.

3. Expand Toggle Questions to compare each selected answer with the correct answer.

4. Download individual PDF/CSV summaries or filtered list summaries. Check headings and filters to confirm the export scope.

Field definitions and change impact

Field / Feature	Definition and source	Effect of changes
Status	in_progress or completed.	Starting creates an attempt; submitting/completing marks it completed.
Score	Question points awarded for recorded correct answers.	Different from XP, total user points, and ranking position.
Answered / Correct / Wrong	attempted_questions, correct_answers, and wrong_answers tracking.	Incomplete attempts can affect some analytics totals.
Time	started_at, completed_at, and duration tracking.	Drives attempt timelines and ordering.
PDF / CSV	Individual and summary reports.	Downloading does not change app data.
Delete	Removes the attempt record.	Do not assume a score correction or target rollback; separate progress/XP records are not guaranteed to reverse automatically.

Current implementation limit
Changing a downloaded report does not change server or app results. Correct records through a real attempt or an appropriate backend correction.

Data and behavior in detail

Find and inspect a learner result

1. Enter a learner name or email in the search field. Choose All Categories or one saved category, and All Quizzes or one saved quiz.

2. Status offers All Statuses, Completed, and In Progress / Abandoned. Select Completed when checking final results. An unfinished attempt is not a completed result.

3. Set From and To dates for the period you need, then submit the filters. Clear irrelevant filters if an expected attempt is missing.

4. Open the matching attempt's detail action. Check learner, quiz, completion state, correct answers, score, and timing together. Inspect the answer breakdown before treating a score as an error.

5. Use the summary export action for the attempt report. This report describes learner activity; the documentation Chapter PDF button downloads instructions instead.

Delete an attempt log

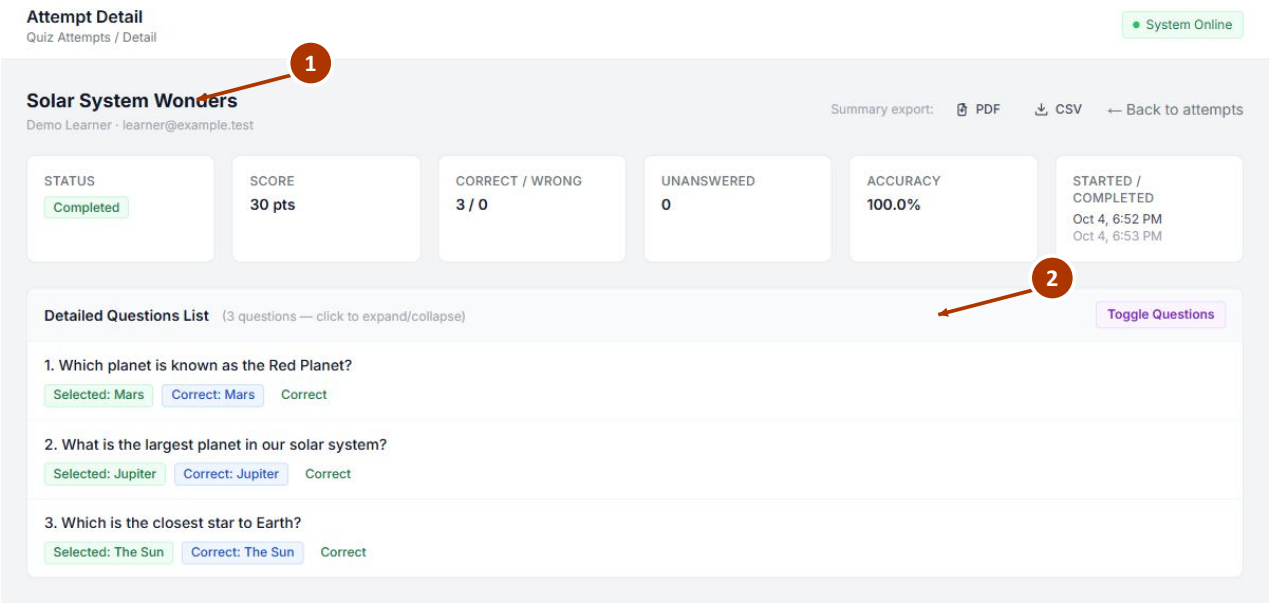

The Delete action asks **Delete this attempt log?** Select **Cancel** to retain it or **OK** to submit deletion. This is a record-management action, not a retry or score-edit button. Verify the row disappears and recheck any statistics that depend on attempt records.

Verification after saving

Compare the same demo user, quiz, answers, and score against the app result.

Answer breakdown for one attempt

Open View and expand Toggle Questions to compare selected and correct answers. PDF/CSV summarizes this attempt.

Actual source preview - local demo data - live values may differ

1. Quiz and summary exports

2. Expanded answer details

Technical sources

Server paths are inside Quiz Application Admin; lib paths are inside Quiz Application.

app/Http/Controllers/Admin/QuizAttemptController.php

app/Http/Controllers/Api/QuizApiController.php

Conclusion Section

Use this guide to configure Quizs, verify the actual app behavior, and keep administrator content, server configuration, and native app changes in their correct places.

Administrator access

Open your own backend domain followed by /admin/login. Use the credentials created for that deployment. Accounts, passwords, and URLs from unrelated reference projects do not apply to Quizs.

Release verification

Complete a category, quiz, question, attempt, result, target/profile, notification, and attendance test. Confirm native integrations separately on the intended device and provider account.
