Contact: +91-8787388949

Choose message content, audience, and tap destination. Sending creates an in-app inbox recipient record; phone push also requires FCM credentials, permission, and a registered device token.

Screen / location: Admin → Push Notifications → New Push Notification

Actual source preview - local demo data - live values may differ

1. Title, message, and image

2. All or Specific Users

3. Destination and quiz

Step by step

1. Open New Push Notification. Enter a concise Title and a clear Message.

2. Optionally upload a Thumbnail image up to 2 MB.

3. Choose All Users or Specific Users. Specific requires at least one selection; verify a test message with one intended account first.

4. Select Destination. Quiz Details additionally requires a valid Quiz selection.

5. Check spelling, audience, and destination, then click Send Notification.

6. Open List → View to inspect recipients and read state. Check the app inbox and native notification tap separately.

Field definitions and change impact

Field / Feature	Definition and source	Effect of changes
Title	Required string; maximum 255 characters.	Notification heading.
Message	Required string; maximum 1000 characters.	Inbox and push body.
Thumbnail	Optional image; maximum 2048 KB.	Notification image URL; rendering depends on the device OS.
Audience	all / specific. Eligible users are active non-admin accounts; this scope does not filter by email verification.	Creates one recipient row per resolved user. Do not test All Users using an administrator account.
Destination	none / attendance / quiz_details / target_progress / achievement / profile.	Controls the app screen opened on tap.
Quiz	Existing quiz ID required for Quiz Details.	Opens the question flow; unavailable quizzes fall back to categories.

Data and behavior in detail

Actual destination behavior

None: announcement without further navigation. Attendance: attendance screen. Quiz Details: selected quiz's question flow. Daily Target: Profile, not a separate target route. Achievement: achievements screen. Profile: profile screen.

Sent versus Read

Status becomes sent when the service starts; it does not prove phone delivery. Recipient read_at changes when the app marks a message read. This version does not persist reliable per-device delivery/failure counts. Inbox records may exist even when Firebase is absent and sending is only logged.

Scheduling, editing, and retry

Current routes provide list/create/show/store. There are no scheduled-send, existing-message-edit, delivery-retry, or campaign-segmentation controls. Sending a correction creates a new notification.

Audience and destination: every choice

1. Enter Title and Message and optionally upload a thumbnail. Choose the all-users audience or the specific-users audience radio button.

2. Specific users reveals the user picker. Tick every intended recipient; switching to this audience without choosing recipients is incomplete. Check identities before sending.

3. Destination offers None (open notifications), Attendance, Quiz Details, Daily Target, Achievement, and Profile. None opens notifications; Attendance opens attendance; Achievement opens achievements; Profile opens the profile.

4. Quiz Details reveals the Quiz dropdown. Choose the saved quiz title that the message refers to. This destination needs a quiz identifier; a missing or invalid quiz cannot open the intended quiz details.

5. Daily Target currently opens the profile area used for target progress, rather than a separate target screen.

6. Submit the send form once, then open the notification detail to review recipients and read state. Test a received notification on a configured device. A sent record alone does not prove that every device displayed the push.

Example: announce a quiz

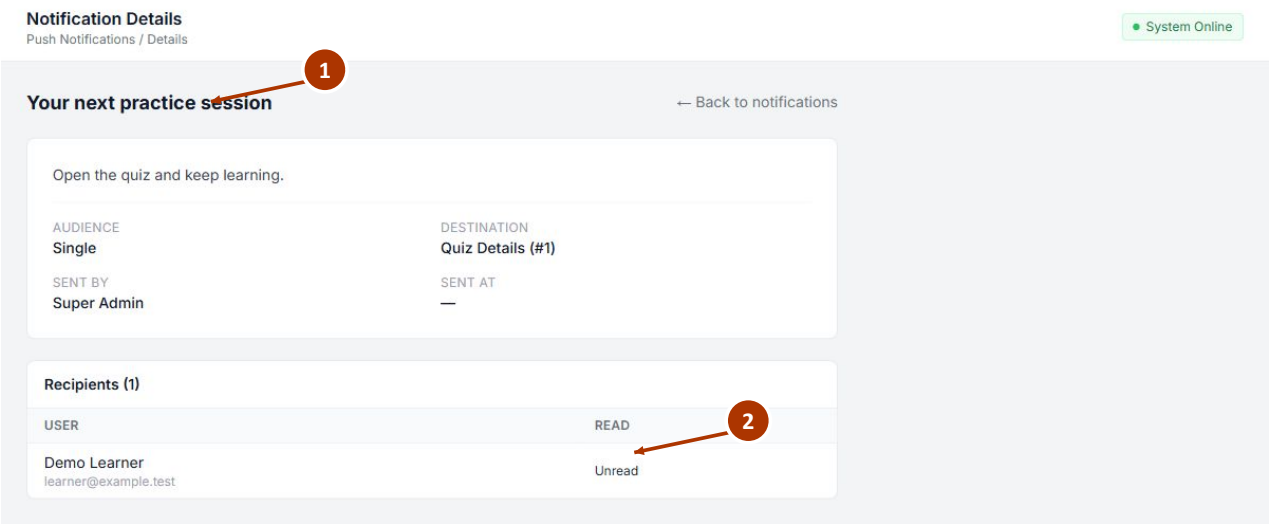

Title: **New practice quiz available**. Message: **Open today's mathematics quiz and try the new questions.** Choose your intended audience, select **Quiz Details**, and select the mathematics quiz in **Quiz**. Send, then tap the received notification and confirm the correct quiz opens. There is no scheduling, edit, or retry control in this form.

Verification after saving

Use the intended signed-in account on a real Android/iOS device with permission. Read the inbox message and confirm its Read timestamp in admin View. Browser preview does not validate native push delivery.

Recipients and read tracking

View shows content, audience, destination, and recipients. Unread means the inbox has not marked the message read; it does not prove a phone-delivery failure.

Actual source preview - local demo data - live values may differ

1. Message details

2. Recipient read state

Technical sources

Server paths are inside Quiz Application Admin; lib paths are inside Quiz Application.

Conclusion Section

Use this guide to configure Quizs, verify the actual app behavior, and keep administrator content, server configuration, and native app changes in their correct places.

Administrator access

Open your own backend domain followed by /admin/login. Use the credentials created for that deployment. Accounts, passwords, and URLs from unrelated reference projects do not apply to Quizs.

Release verification

Complete a category, quiz, question, attempt, result, target/profile, notification, and attendance test. Confirm native integrations separately on the intended device and provider account.
